

LAB TEST 63_E1+E2

1.using GL_lines to write character "G" in a 2D plane, which only moves horizontally. Map "a" and "d" keys to LEFT and RIGHT movement in the X axis. With every step, use gl_rotatef() for rotation mimicking a wheel's movement. "G" has a 30 degree - rotation when pressed "d" and it has a 30 degree + when pressed "a".

[Based on T[main.py](#) file]

- a) change the default background color of the viewing window.
- b) Complete the "G" character lines.

2. Using 2 GL_quads, write the logic needed for moving them the "blue" quad to go up from bottom to top and, "red" quad to go down from top to bottom. When they reach the top and bottom limits, they wrap from the opposite end end. Creating and infinite upwards and downwards movement. [based on [Qmain.py](#) file]

- a) change the default colors of the 2 quads.
